## Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

The inventions of claims 1-11, and 16 relate to a dynamic pressure bearing device in which portions facing a bearing clearance between a fixed body and a rotating body are each formed of resin and the diameter of reinforcement fibers blended as the filling material in either of the resin portions is specified.

The inventions of claims 12-15 relate to a dynamic pressure bearing device in which a portion including a thrust bearing surface of a housing is formed of a resin material and a portion including a fixed surface to which the other metal member is fixed is formed of a metal material.
